Ex. 6 P... Names, Addresses and p... (Owner)

Ex. 6 P... Names, Addresses and phone numb...

Dayton, Ohio 45417

Dear Mr. Ex. 6 P... Na...

The purpose of this letter is to inform you of the results of the sub-slab (the space under your basement floor) and indoor air samples collected from your house on May 2, 2007. As you know, the samples were collected to see if soil vapors from the Delphi plant are moving through the soils and entering the air inside your house. They were specifically tested for the presence of chloroform, trichloroethylene (also known as TCE) and tetrachloroethylene (also known as perchloroethylene or PCE), which have been detected under the neighborhood.

These three chemicals are known as volatile organic compounds (VOCs), which means they easily evaporate (turn from a liquid to a gas) when they are exposed to the soil or air. They have the potential, as vapors, to move through the soils and work their way into building substructures, such as basements, where they can accumulate in the indoor air.

The results for the samples collected at your house are presented below and are identified as "Detected." "ND" (no detection) is used when there is a chemical concentration less than the laboratory's minimum detection limit. Both sub-slab and indoor air samples are measured in units called parts per billion (ppb). Following the result for each sample is the "screening level" for that chemical. The Ohio Department of Health (ODH) has recommended the screening levels for sub-slab and indoor air.

Ex. 6 P... Names, Addresses and phone... **Sub-Slab Sampling Results:**

Detected: Chloroform at 220 ppb, ODH recommended screening level: 22 ppb

Detected: TCE at 200 ppb, ODH recommended screening level: 4 ppb

Detected: PCE at 2.1 ppb, ODH recommended level: 120 ppb

Ex. 6 P... Names, Addresses and phone... **Indoor Air Sampling Results:**

Detected: Chloroform at 0.43 ppb, ODH recommended screening level: 2.2 ppb

Detected: TCE at 0.23, ODH recommended screening level: 0.4 ppb

PCE: **ND**, ODH recommended screening level: 12 ppb

The results from the **sub-slab sample** collected at your house show the chemicals chloroform and TCE were **found at levels higher** than the screening levels recommended by the ODH. The **indoor air sample** results show the levels of the three chemicals were **found at levels below** the screening levels recommended by the ODH.

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY**  
CINCINNATI, OHIO 45268

The levels of chloroform and TCE found in the sub-slab sampling show that further monitoring should be performed. Therefore, the U.S. EPA and the ODH recommend that your house be placed into a quarterly (four times a year) sampling program to monitor the indoor air levels and ensure your long-term protection.

Delphi and the U.S. EPA are working together to address the site contamination and protect the community, and we will be contacting you in the near future about scheduling the quarterly sampling.

If you have health-related questions concerning this matter, please contact Bob Frey at the Ohio Department of Health at 614-466-1069. If you have questions related to the sampling or the on-going site investigation, please feel free to contact me at 513-569-7539. You may contact Delphi directly at Delphi's toll-free information number at 1-866-4-DELPHI (1-866-433-7744).

Sincerely,

Steven L. Renninger  
On-Scene Coordinator  
U.S. EPA Region 5

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
CINCINNATI, OHIO 45268

October 1, 2007

Ex. 6 P... Names, Addresses and p... Tenant)

Ex. 6 P... Names, Addresses and phone numbers...

Dayton, Ohio 45417

Dear Ms. Ex. 6 - 1...:

The purpose of this letter is to inform you of the results of the sub-slab (the space under your basement floor) and indoor air samples collected from your house on May 2, 2007. As you know, the samples were collected to see if soil vapors from the Delphi plant are moving through the soils and entering the air inside your house. They were specifically tested for the presence of chloroform, trichloroethylene (also known as TCE) and tetrachloroethylene (also known as perchloroethylene or PCE), which have been detected under the neighborhood.

These three chemicals are known as volatile organic compounds (VOCs), which means they easily evaporate (turn from a liquid to a gas) when they are exposed to the soil or air. They have the potential, as vapors, to move through the soils and work their way into building substructures, such as basements, where they can accumulate in the indoor air.

The results for the samples collected at your house are presented below and are identified as "Detected." "ND" (no detection) is used when there is a chemical concentration less than the laboratory's minimum detection limit. Both sub-slab and indoor air samples are measured in units called parts per billion (ppb). Following the result for each sample is the "screening level" for that chemical. The Ohio Department of Health (ODH) has recommended the screening levels for sub-slab and indoor air.

Ex. 6 P... Names, Addresses and phone nu...

**Sub-Slab Sampling Results:**

Detected: Chloroform at 220 ppb, ODH recommended screening level: 22 ppb

Detected: TCE at 200 ppb, ODH recommended screening level: 4 ppb

Detected: PCE at 2.1 ppb, ODH recommended level: 120 ppb

Ex. 6 P... Names, Addresses and phone numb...

**Indoor Air Sampling Results:**

Detected: Chloroform at 0.43 ppb, ODH recommended screening level: 2.2 ppb

Detected: TCE at 0.23, ODH recommended screening level: 0.4 ppb

PCE: **ND**, ODH recommended screening level: 12 ppb

The results from the **sub-slab sample** collected at your house show the chemicals chloroform and TCE were **found at levels higher** than the screening levels recommended by the ODH. The **indoor air sample** results show the levels of the three chemicals were **found at levels below** the screening levels recommended by the ODH.

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY**  
CINCINNATI, OHIO 45268

The levels of chloroform and TCE found in the sub-slab sampling show that further monitoring should be performed. Therefore, the U.S. EPA and the ODH recommend that your house be placed into a quarterly (four times a year) sampling program to monitor the indoor air levels and ensure your long-term protection.

Delphi and the U.S. EPA are working together to address the site contamination and protect the community, and we will be contacting you in the near future about scheduling the quarterly sampling.

If you have health-related questions concerning this matter, please contact Bob Frey at the Ohio Department of Health at 614-466-1069. If you have questions related to the sampling or the on-going site investigation, please feel free to contact me at 513-569-7539. You may contact Delphi directly at Delphi's toll-free information number at 1-866-4-DELPHI (1-866-433-5744).

Sincerely,

A handwritten signature in black ink, appearing to read "Steve Renninger", is positioned above the typed name.
